

Gamma spectrometry applications at Forsmark

GammaUser 2014

2014.10.07

Sekretessklass: Öppen (S1)

Forsmark NPP – three Boiling Water Reactors

- Process systems (water)
- Contamination of process systems
- Condenser off-gas and ventilation
- Environment
- Waste and free release
- Whole body counting

Count rooms at F1, F2 and F3

- Main task is to measure samples from the process and the environment – liquid and gas
- Equipment:
 - Canberra detectors, p-type coaxial, 10–40 %
 - Canberra electronics: Lynx, DSA2000, analogue ICB modules
 - Canberra software: VMS-Genie and Pro-Count, now changing to Genie2000 and Apex client/server solution
- Calibration with multi-gamma standard except for gas geometries (Am-241 + Eu-152)
- No summing corrections
- Challenges:
 - Upgrading the system
 - Handling nuclide data in LIMS

Count room F3

Electric cooling

Inner surface activity of process systems

- External measurements on pipes and heat exchangers to determine contamination on inner surfaces
 - What causes dose rates in the plant?
 - Long-term trending, nuclide specific decontamination factors
 - Annual reports and cross-department seminar
- Original system MADAC by Asea Atom has been developed
 - Collimated lead shield on mobile cart
 - Mobile Ortec detector, 4%, 5 L dewar
 - Dspec LF, Gammavision 6.09
 - Efficiency calibration with flat source and transfer software Simba
- Challenges:
 - To get a correct efficiency evaluation – system knowledge!
 - Rough handling, wear on the equipment

Mobile equipment for inner surface activity

7 | 2014.10.07

On-line off-gas measurement (FINESS)

- Tracking of fuel failures in condenser off-gas
 - Repeated measurements on a flow-through cell
 - Xe-133, Xe-135, Xe-138, Kr-85m, Kr-88...
 - Fuel failure detection and development
 - Tool to locate failed fuel (flux-tilting)
- Equipment:
 - Planar or small coaxial Ortec detectors, X-cooler 2
 - Ortec electronics: Dspec Plus
 - Gammavision 6.04, using job files and ROI reports
- No efficiency calibration – only trending of raw data
- Challenges:
 - Inflexible analysis routine
 - No network connection, only local access to data

On-line off-gas measurement (FINESS)

sampling

HPGe

Fuel failures, Xe-133 indications

Stack monitoring

- On-line measurements
 - 10 L flow-through steel marinelli beakers
 - Ortec detectors, coaxial, ca 15%
 - Ortec electronics, Dspec Jr 2.0
 - Ortec/Gammadata software
Gammavision/Windas
 - Indirect calibration using process gas
 - Extremely flexible data handling
- Challenges:
 - Correct and traceable calibration
 - Electric cooling
 - Background interpretation, 1 month measurement time

For another time...

- Waste, free release measurements
- Challenges:
 - Uneven distribution of radioactive materials
 - Representative calibrations
 - Combined uncertainties, missing and dangerous?
 - Nuclide vectors

Thank you!
