Geometries and materials – 1/3

Detectors parameters

Parameter	Detector A	Detector B	Detector C	Detector D	Detector E	Detector F
Crystal type	p	n	p	n	p	n
Crystal material	Ge	Ge	Ge	Ge	Ge	Ge
Crystal diameter (mm)	60	60	76.2 (60)	82.55 (60)	101.6 (90)	101.6 (80)
Crystal length (mm)	60	60	133.4	133.4	60.3	134.4

Geometries and materials – 2/3

Samples parameters

Parameter	Reference	Soil 1 (vol. = 254 cm³)	Soil 2 (vol. = 56 cm³)
Sample diameter (including container) (mm)	60	90	60
Sample height (including container) (mm)	20	40	20
Sample material	Water	Quartz	Quartz
Container-to- detector-window distance (mm)	0.0	0.0	0.0

Geometries and materials – 3/3

Samples materials

Material	Density (g/cm³)	Chemical formula
Water	1.00	H₂O
Quartz	1.40	SiO₂
Plastics (polystyrene)	1.05	C₈H₉

ET factors_reference-to-soil 1

Reference-to-soil_p type

Reference-to-soil_n type

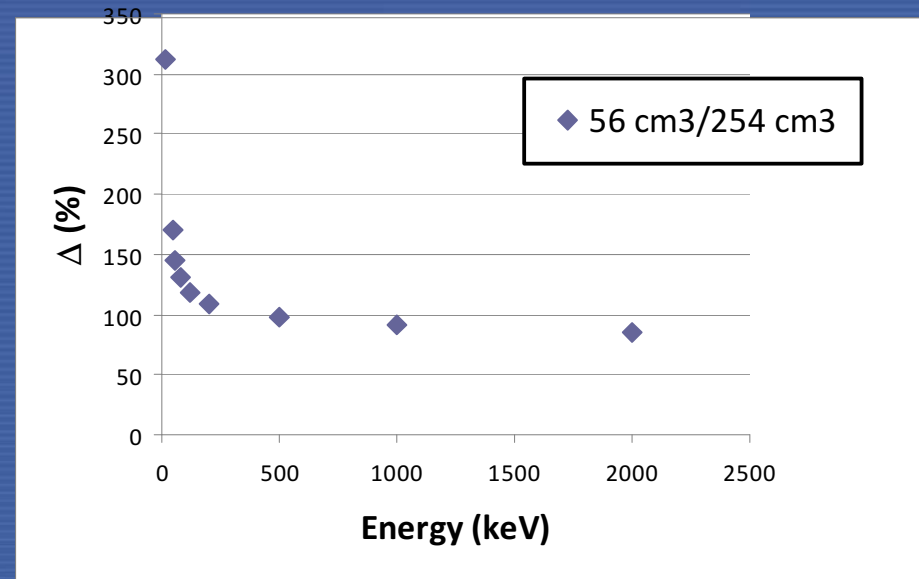

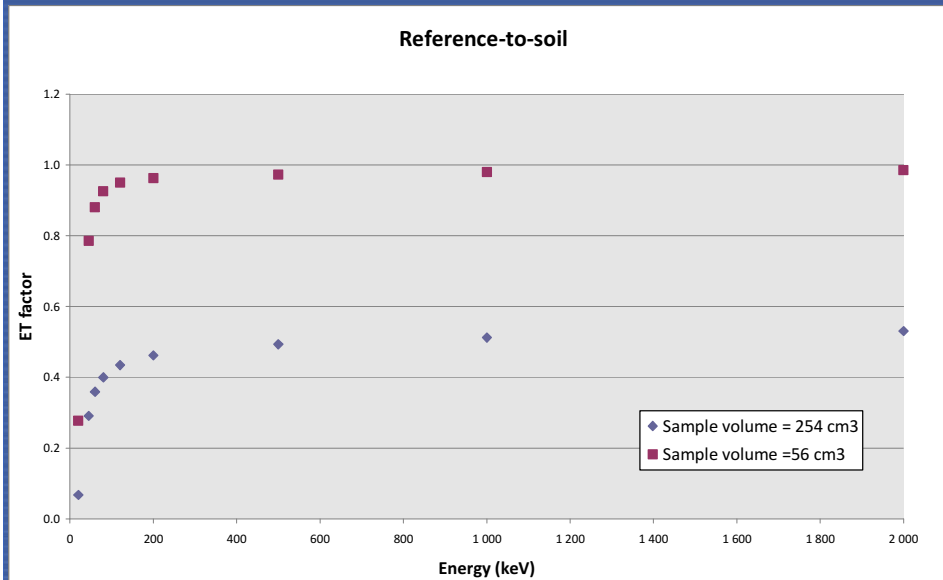

- CF ↓ if E ↑ in the whole considered energy range
- High CF at low energies

Both for p and n type, low dependence of CF on detector dimensions
sample effect (self-absorption) is dominant

Comparison of ET factor_different volumes

Detector D

In each sample self-absorption effect is constant from 500 to 2000 keV \rightarrow **ratio between the ET factors is constant**
E < 500 keV: **higher dependence on energy of ET factor in the big sample** (higher self-absorption)
